BEFORE YOU SCROLL

You have 40 open roles. Your top location's funnel has been stuck at screening for two weeks. Three candidates ghosted after offer. Your hiring manager is asking for updates you don't have yet.

Artera Services had 28 workflows to audit, 50 questions each, with logic jumps throughout. They typed the prompt. Cue, Fountain's Frontline Superintelligence, ran it. **2 hours of work done in 2 minutes.**

These are the prompts that get your funnel moving again without exports, spreadsheets, or manual chasing.

This is the page you open.

Every prompt here is built for a specific moment where frontline hiring breaks down. From the screening backlog, the offer-to-Day-1 drop-off, the job post that isn't converting, to the funnel data nobody has time to analyze.

Copy them as-is. Customize them for your role, your location, and your brand. The more context you provide, the sharper the output. That's the rule with AI: **specificity wins.**

Cue Tip The best outputs come from context.

Include: **role, location, shift, pay range, start date, and top 3 must-haves.**
